

ARUSLOKY

Objective of the game

Arusloky is a new puzzle whose objective is to rebuild the red and yellow circles back to the start position.

Use tips

Always move softly.

Don't try to move the two circles at once.

Slide the thumb softly on the circle to move it.

It is ideal to keep the other circle fixed by pressing it slightly with the other hand's thumb.

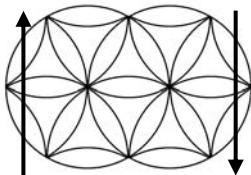

Figure 1

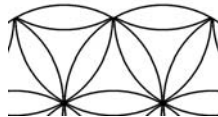

Figure 2

The movement must be up or down, NEVER to the inside (Figure 1).

To obtain the correct movement, the oval pieces must be in their right position (Figure 2).

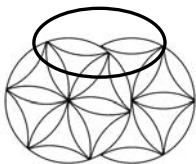

Figure 3

Figure 4

If you try to make a turn with the pieces as shown in figures 3 and 4, the circles will be blocked. Place the oval pieces in the right position as shown in figure 2 to make the turn possible.

General solution

First, one of the two circles has to be rebuilt (the red or the yellow one).

Discover and familiarize with those movements that allow you to build the second circle without disordering the first circle too much, until achieving the final solution.
